Personal Profile

Computer Science student specializing in Data Science and Artificial Intelligence, with hands-on experience in backend development and applied machine learning across computer vision, NLP, and predictive modeling. Award-winning competitor in international AI Olympiads with a track record of building end-to-end ML systems and production backend services. Seeking software development and AI/ML research opportunities to build intelligent systems.

Education

University College Dublin Sep 2026 – Present
Computer Science with Data Science and Artificial Intelligence

INTI International College Penang Apr 2025 – Jun 2026
Cambridge A Levels — 4A (Mathematics, Further Mathematics, Physics, Chemistry)*

Chung Ling High School Penang Jan 2020 – Dec 2024
Sijil Pelajaran Malaysia (9A+, 1A) — Ranked 2/441 in Year, Best Graduate of 2024

Leadership Experience

Malaysian AI Olympiad Fellowship, [MAIO](#) (Remote) Aug 2026 – Present

- Plan 14+ trainings for Malaysian students on Olympiad AI, involving ML, CV, NLP and Audio domains
- Brainstorm and refine 2+ task ideas to ensure Malaysian students are trained and exposed to challenging problems

Vice President of Activities, 21st INTIMA, INTI (Remote) Nov 2025 – Present

- Review and manage 84+ events across campus by societies and 28+ events and initiatives by INTIMA
- Ensure wellbeing and constitutional compliance of 37 societies; established 2 new societies in students' interests

Technical Director, [AMISO](#) (Remote) Jun 2025 – Present

- Coordinate a team of 5 developers across Malaysia to expand outreach and maintain 100% website uptime
- Develop a blueprint for a mobile application to promote International Science Olympiads

Section Leader, [Code in Place](#) 2025 Apr 2025 – Jun 2025

- Taught 15+ students Python from all around the world from scratch
- Conducted 2 TeachNow sessions to help students identify bugs and improve programming skills

Skills

- Programming Languages:** Python, C++, JavaScript, SQL, PHP
- Machine Learning & AI:** Computer Vision, NLP, Deep Learning, Model Training & Fine-Tuning, Data Pipeline Engineering, Model Evaluation & Benchmarking
- Software Development:** Backend (Django, PHP, Node.js), REST API Design, MVC Architecture, Mobile (Flutter, Java)
- Professional:** Technical Leadership, Team Coordination, Research Communication, Public Speaking

Awards and Honors

- International Olympiad in Artificial Intelligence – **Bronze** (2026)
- Asia Pacific Olympiad in Artificial Intelligence – **Honorable Mention** (2026)
- National Artificial Intelligence Competition (NAIC) – **1st Runner Up** (2025), **Champion** (2026)
- Northern Eurasia Olympiad in Artificial Intelligence – **Rank 4/188** (Day 1)
- Malaysia Artificial Intelligence Olympiad – **Gold** (2025), **Rank 1** (2026 Qualifiers)
- USA Computing Olympiad – **Gold Division** (2026)

Certification

- Project Management Fundamentals Jun 2025
- Neural Networks and Deep Learning, DeepLearning.ai May 2025

Projects

Embrace Study (NDA)

Aug 2026

- Built secure participant-tracking infrastructure for a 200+ person prospective study on maternal-infant postpartum psychological adjustment
- Developed the platform with *Next.js*, *ShadCN* and *Supabase*, ensuring interpretable insights and robust data protection

Diabetic Retinopathy Screening (Link)

Jun 2026

- Engineered a preprocessing pipeline (*CLAHE*, *Graham's Method*, *Feature Adaptive Cropping*) (*opencv*, *scikit-learn*, *numpy*) for retinal image analysis
- Trained an ensemble model (*ResNet-34*, *EfficientNetB4*, *RandomForest*) (*scikit-learn*, *Pytorch*, *transformers*) reaching 91% accuracy on limited, unbalanced data

Byte of Kuih (Link)

Jul 2025

- Curated and cleaned a 16,000+ image dataset to train an *EfficientNetV2* classifier for recognizing Malaysian kuih
- Fine-tuned the model (*PyTorch*, *huggingface*, *transformers*) to reach 98% validation accuracy and 100% test accuracy

JotMe (Link)

Jun 2025

- Built a mental-health journaling platform with interactive *ChartJS* mood visualizations and an NLP backend combining *KeyBERT* (*transformers*) keyword extraction with emotion-detection models
- Implemented graph-based contextual sentiment analysis (*networkx*) to deliver insights and crisis-intervention alerts

GUIDE-SHARK (Link)

Mar 2025

- Built a full-stack health-diagnostics app with a Flutter frontend and a *Django* REST backend, applying clean architecture and separation-of-concerns design
- Integrated an AI model (*Pytorch*, *scikit-learn*) to analyze patient symptoms and generate rapid preliminary diagnoses
